# Open Source Web Design System

Project Title	Open Source Web Design System
Project Summary	Work with experienced software developers and learn software best practices as you contribute to a design system that is used by a new federal website that serves millions of users.
Country	United States
Country/Region of Focus	United States

Project Description

The General Services Administration is building a web design system for federal contracting and financial assistance applications to improve the efficiency, reliability, and consistency of our websites. Design system elements are responsive, accessible, and meet federal security standards. We are primarily using Angular, Typescript/Javascript, and HTML/SCSS. The design system includes patterns for search, data entry, reports and business analytics, help pages, dashboards, and landing pages. It also includes a wide range of user interface controls including form controls, navigation controls, charts and graphs, and others. The source code is hosted on GSA's enterprise github.
